

West Northamptonshire Council

Personal Details:

Name: Parish Clerk
E-mail: clerk@crickparishcouncil.org.uk
Postcode: [REDACTED]
Organisation Name: Crick Parish Council

Comment text:

Crick Parish Council have reviewed the Braunston & Crick ward and would propose that the new boundary is determined to reflect community interests and identifiers. There are common interests around DIRFT, M1/M45, A428 and A14, solar farms, wind turbines, warehousing, school catchment areas and historic village identities/clusters (eg: Barby & Kilsby, West Haddon & Winwick, Crick & Yelvertoft), There is less commonality between the parishes in the south of the current Braunston & Crick ward (Braunston, Welton, Ashby St Ledgers, Daventry North. The recommendation is that 5 polling districts to the south are removed and 5 polling districts to the East are added. The new ward would be called Crick, Kilsby & West Haddon. The excel file attached outlines the proposal.

How do I enter my electorate data?

- 1: Type in all your data, by polling district, in sheet "Electoral data". Use the left-hand table, which is columns B to I.
- 2: It's important that every polling district is listed separately. Use your polling district code to identify polling districts in column B. If you have another description, or something else that you think would be helpful in order to identify the area, put this in column C.
- 3: If the polling district is in a parish, fill in the columns for parish (column D) and parish ward (column E). If there are no parish wards in the parish, or the polling district is in an unparished area, leave this blank.
- 4: If the polling district is in a parish which is part of a joint or grouped parish council, fill in the name of this group in column F. Make sure that this column is filled in for all parishes in the group.
- 5: Fill in the existing ward name in column G.
- 6: Enter the current electorate figures for each polling district. Then enter the figures which are predicted for five years. Although we recognise that you will be using a particular formula or method to work out these projections, make sure that the figures are rounded to a whole number before entering them in the spreadsheet. All polling districts should contain an approximate number of whole electors rather than fractions of electors. We work out the predicted electorate of the parishes, district wards and county divisions by building up from polling districts.

How do I check my data?

- 1: If you would like to check your data, use the table on the right. Above the right-hand table is a box called "Check my data". This shows you the total number of electors in all the polling districts. If this isn't right then there is a mistake in the left-hand table.
- 2: Once you have entered all the electoral data in columns B to I, then put in the names of the wards in column K. The spreadsheet will match what you type in column K to what you put in column G. It will add up the electorates of the polling districts in each ward.
- 3: In column L enter the number of councillors for each ward. Once all the numbers are entered, you will be able to see whether the ward is over-represented or under-represented, and by what percentage. (This will only work when the number of councillors has been filled in for all wards.)
